

OUR SUSTAINABLE UNIVERSITY

Advancing the Circular Economy A University Perspective

Dr Rhiannon Hunt
Circular Economy Manager

25th October 2023

LINEAR ECONOMY

What's wrong with how we've done things in the past?

Historically, we've operated on a linear, 'take-make-waste' model. On a planet with finite resources and a limited capacity to assimilate waste and pollution, this is unsustainable and can't continue indefinitely.

CIRCULAR ECONOMY

What do we mean by a circular economy?

If sustainable development involves *'meeting the needs of the present without compromising the ability of future generations to meet their own needs'*, a circular economy is simply a means of achieving this.

LINEAR ECONOMY

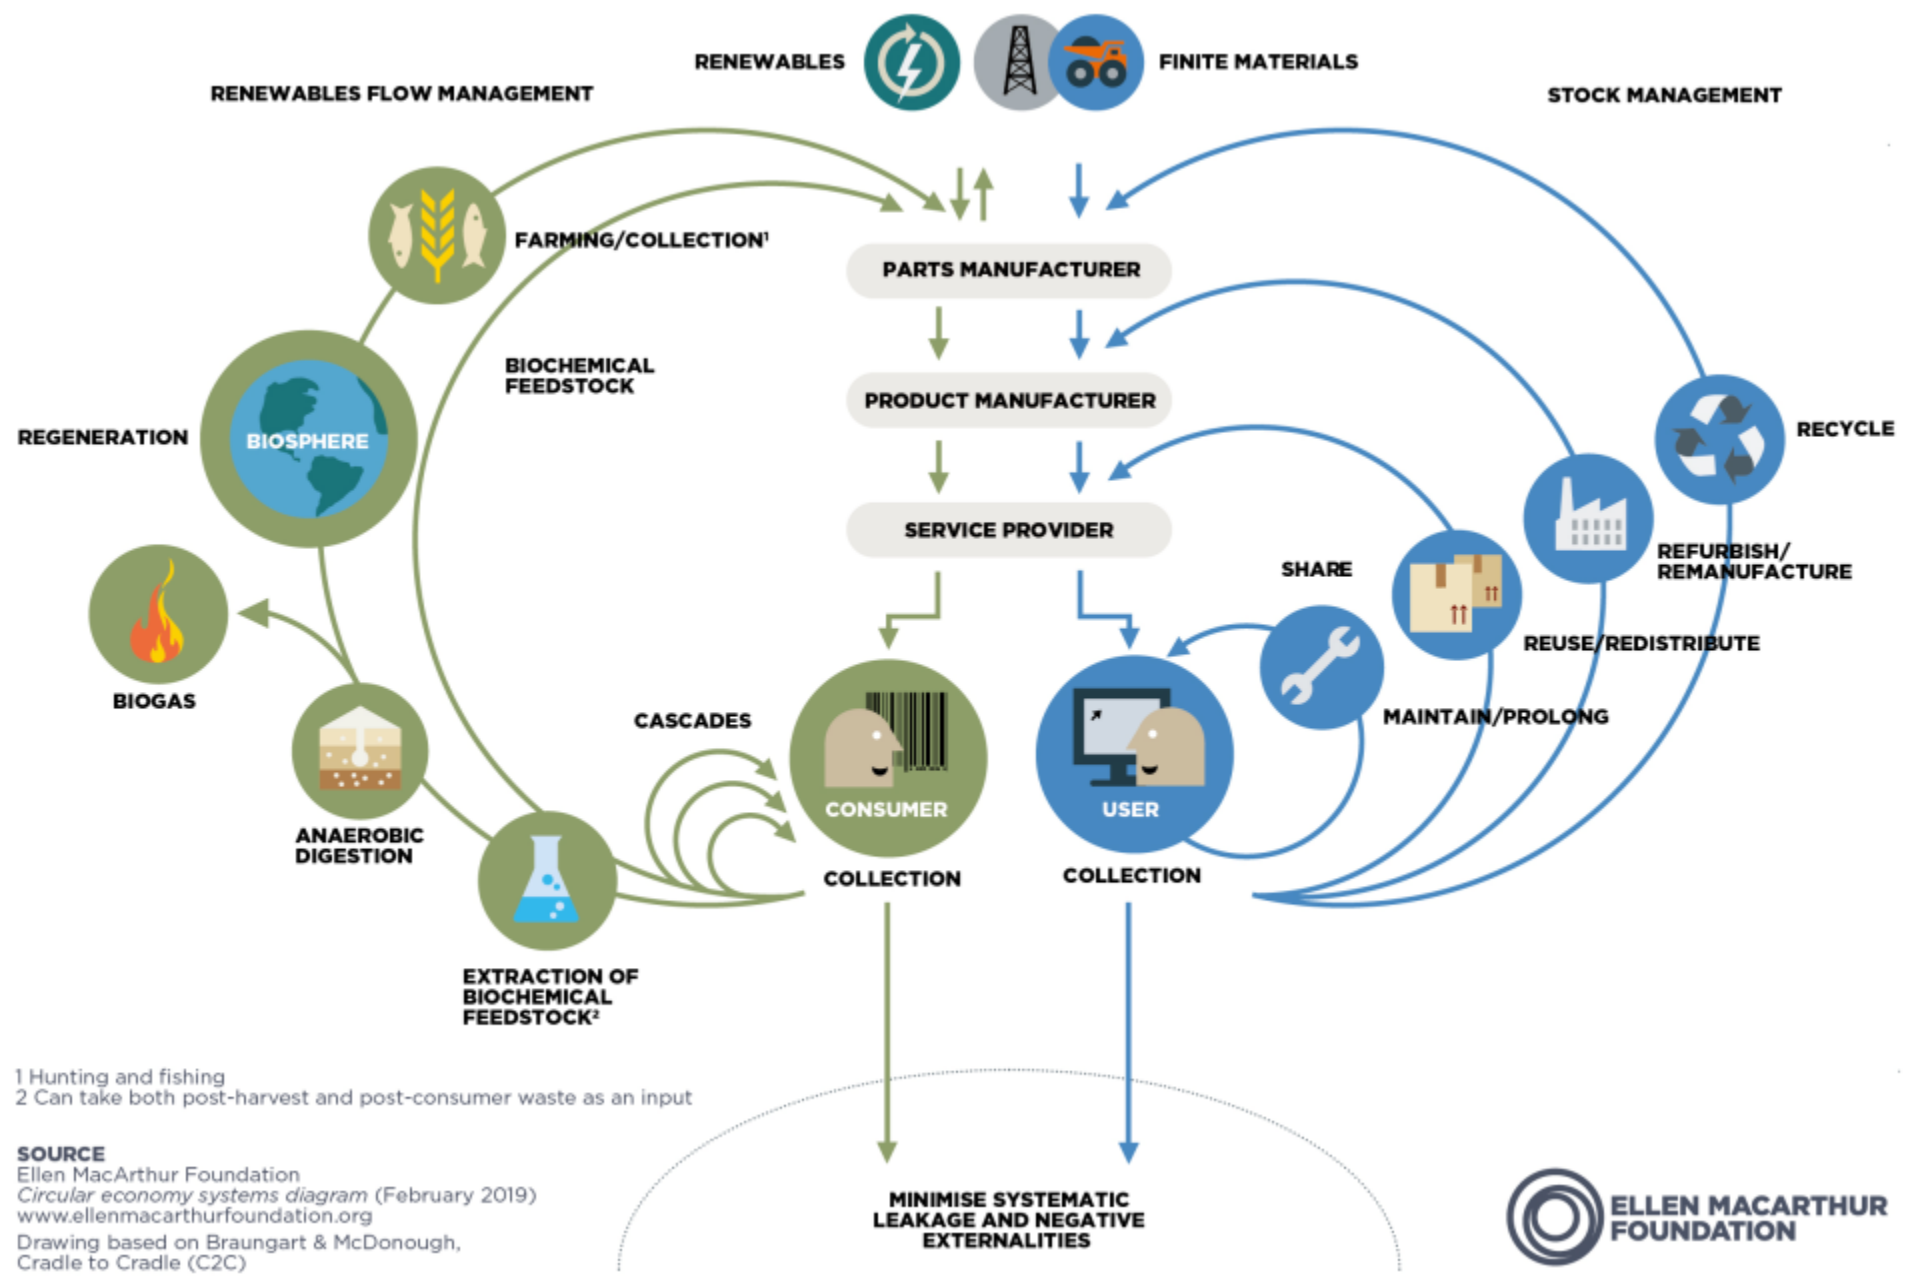

RECYCLING ECONOMY

CIRCULAR ECONOMY

THE ORIGINAL

1 Hunting and fishing
 2 Can take both post-harvest and post-consumer waste as an input

CIRCULAR ECONOMY BENEFITS

Students

Staff

Operations

CIRCULAR ECONOMY PRINCIPLES

Efficient Resource Use

- Is it needed?
- Can it be sourced internally?
- Can we use less of it?
- Are more efficient alternatives available?
- Are consumables conserved when in use (e.g. energy, water, fuel)?
- Can it be leased or accessed?

CIRCULAR ECONOMY PRINCIPLES

Efficient Resource Use

- Smart plumbing solutions, saving water and energy
- Refill campaign to eliminate disposable cups, bottles and containers
- Removal of handtowels in favour of hand dryers

CIRCULAR ECONOMY PRINCIPLES

Maximising Value & Utility

- Is it durable?
- Is it easy to repair, service and upgrade?
- Can it be reused?
- Are supporting services available that will keep it in use for longer?

CIRCULAR ECONOMY PRINCIPLES

Maximising Value & Utility

- Resale opportunities using Uni Green Scheme
- Redistribution of furniture and equipment between faculties and departments using Warp It
- Promotion of sustainable furniture solutions, such as repair and remanufacture

CIRCULAR ECONOMY PRINCIPLES

Closing the Loop

- What happens to the product at end-of-life?
- Can it be easily disassembled and repurposed or recycled?
- Is it possible to extract valuable materials and resources that can be used in other ways?

CIRCULAR ECONOMY PRINCIPLES

Closing the Loop

- Segregation of food waste for anaerobic digestion to create energy and fertilizer
- Recycling of confidential paper waste into professional hygiene paper products
- Improved segregation of recyclable waste streams, alongside signage, guidance and engagement

CIRCULAR ECONOMY PRINCIPLES

Regeneration, Renewability & Wellbeing

- Can nutrients be returned to natural systems?
- Are natural resources managed in a renewable way?
- How can we care for nature and communities, ensuring we have a positive impact?

CIRCULAR ECONOMY PRINCIPLES

Regeneration, Renewability & Wellbeing

- Composting of food and green waste at Ness Gardens with the help of a rocket composter
- Gardening and food growing opportunities for students via Sowing the Seeds
- Establishment of biodiversity- and pollinator-supporting landscapes and features in the public realm

CIRCULAR ECONOMY PRINCIPLES

Circular by Design

- Has the full lifecycle(s) been considered from the outset?
- Are circular economy principles embedded within the design or specification?
- Are services supportive of a circular economy available?

CIRCULAR ECONOMY PRINCIPLES

Circular by Design

- Provision of product circularity evaluation guidance as part of the procurement and purchasing process.
- Embedding of circular economy and sustainability into our estates strategy through the Sustainable Built Environment Investment Framework.
- Development of a Circular Economy Framework to set out how circularity will be achieved on campus

CIRCULAR ECONOMY PRINCIPLES

Data & Information Transparency

- What are the impacts of our supply chains?
- Can assets be traced and monitored, and information about their status accessed?
- What services and systems are available to facilitate a circular economy?

CIRCULAR ECONOMY PRINCIPLES

Data & Information Transparency

- Establishment of an Asset Management Database
- Estimation of supply chain Scope 3 CO₂e emissions using AI
- Creation of clear guidance on available circular economy services, including recycling and waste management
- Engagement with internal and external stakeholders to collate data and information

CIRCULAR ECONOMY PRINCIPLES

- Leading by example
- Utilising levers of influence
- Engagement up and down our supply chain

Leadership & Influence

CIRCULAR ECONOMY PRINCIPLES

Leadership & Influence

- Collaboration with Merseyside Recycling and Waste Authority for the Circular Economy Club Liverpool City Region network and events
- Implementation of Net Positive Futures to engage our supply chain

CHALLENGES & OPPORTUNITIES

Challenges

- Sustainability is a 'wicked problem' and circular economy solutions require a holistic, systems perspective.
- Engaging with a wide variety of stakeholders is essential for successful implementation, which can take time.
- Siloed working can present significant challenges, particularly for information and data sharing and transparency.
- It can be difficult to balance the long-term benefits of circular economy solutions against immediate time and cost pressures.

CHALLENGES AND OPPORTUNITIES

Opportunities

- Adopting a circular economy approach can help to reduce costs and save the institution money in the long term.
- Address additional challenges, such as data security, supply chain disruption, reputational risk and storage.
- Improve efficiency, through collaboration and scaling of solutions.
- As a cross-cutting concept, circular economy offers teaching, learning and research opportunities on real-world problems.
- A circular economy approach can also support engagement with the wider community and stakeholders.

CIRCULAR ECONOMY APPROACH

- Adopting an iterative approach.
- Establishing a clear framework and principles to promote awareness and understanding.
- Stakeholder engagement and collaboration are key.
- Data collection and analysis to identify priorities, set achievable targets and to establish a baseline from which to measure progress.
- Provision of services in addition to guidance, reducing administrative burden.
- Document and celebrate case studies and best practice examples.
- Reach out to supply chains, communities and wider stakeholders.
